

## Year 2 From Pole to Pole Home Learning Project

### Build your own micro-habitat!

- In this activity you are going to create a micro-habitat in what is called a terrarium. Terrariums are a bit like an aquarium but for plants. To find out how, watch the online lesson from the Oak National Academy ([here](#)). If you like you can start the lesson video 2 minutes from the beginning.

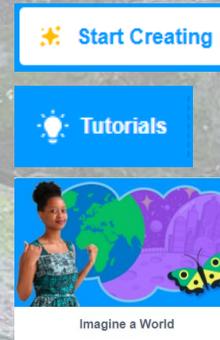

### Make a musical instrument

- Watch this video about a band that has made their own instruments from things that they find ([here](#)).
- Make your own instrument from recycling. Will it be a type of drum or will it be something that can create different notes?
- Make up a rhythm or tune inspired by a habitat of your choice.

### Code an imaginary World

- Open Scratch ([here](#)). Click on the 'Start Creating' button.
- Now look at the top of your screen and click on 'Tutorials'
- Select the 'Imagine a World' lesson.
- Follow the instructions to create your own World.
- Have fun!

### Origami Animal Bookmark

- Go to the video instructions from Red Ted Art ([here](#)).
- Choose an animal bookmark that you would like to make.

### 360° Tour of a rainforest

- Go on a journey through the Amazonian rainforest ([here](#)).
- This is a 360° video, so you can use your mouse or finger to move your view of the rainforest, just as if you were looking all around you.
